

**Typical Applications**

- *Highways*
- *Interstates*
- *Distribution depots*
- *Container ports*
- *Truck stops*
- *Industrial parks*
- *Toll booths*

HighwayDrain is designed to address drainage demands of areas with fast moving traffic. The single piece construction removes the concern of components vibrating loose when frequently trafficked by high speed vehicles. Ideal for use in applications where the drainage cannot be positioned outside the flow of traffic.

HighwayDrain has been designed for simple installation in a wide range of urban and rural applications, as well as highways and Interstates. One-piece, 4-foot long units are quick to install, reducing costly and inconvenient road closures.

**Monolithic polymer concrete 8" trench drain with high capacity intake slots and pipe connection flume.**

# HighwayDrain - System Layout

## Flume Outlets

Large high capacity polypropylene outlet for connection into a collector line or catch basin. Fits to base of outlet channels. Available as 8" or 12" Schedule 40 vertical or horizontal.

Seal unit to channel using silicone and to pipe system using flexible sealant.

Vertical outlet

Horizontal outlet

## 4-Foot Channels

0.6% sloped channels in 4-foot lengths and twenty-five depths which connect to create 100 feet continuously sloping run. System is load tested to EN 1433 Load Class E (60 tons).

Neutral channels available in three depths. Can be used to create neutral depth runs, or inserted into sloping runs to extend overall length.

## Access Channels

Neutral 4-foot long channels in three depths to provide access into the channel for maintenance. Supplied complete with ductile iron 19.69" (0.5 meter) bolted grate. 4-bolt lockable grate is load tested to EN 1433 Load Class E (60 tons).

**Outlet Channel**

Neutral 4-foot long channels in 3 depths to provide evacuation of system by use of flume outlet. Provides high capacity output (928 to 2,867 GPM).

Supplied with ductile iron 19.69" (0.5 meter) 4-bolt lock down grate to provide access to system and pipe work for maintenance.

Grate is locked down with 4 bolts and is load tested to EN 1433 Load Class E (6)

**8" Inlet/Outlet Cap**

8" Schedule 40 plain end pipe. Polypropylene sleeve slides over the closing cap to provide an inlet or outlet cap. with guides to illustrate where to cut for 01, 5, 10, 15, 20 & 025 channels. Seal unit to channel using silicone and to pipe system using flexible sealant.

Deep - HD025

**Closing Cap**

Polypropylene closing end cap with guides to illustrate where to cut for 01, 5, 10, 15, 20 & 025 channels. Seal unit to channel using silicone and to pipe system using flexible sealant.

## Parts Table

Description	Part No	Length		Invert Depth - female		Invert Depth - male		Weight lbs
		inches	mm	inches	mm	inches	mm

### Notes:

1. Add nominal 1" (25mm) to invert depth for overall trench unit depth.
2. Closing & Outlet caps can be cut down for use with shallower trench units.
3. Horizontal flumes are a two-piece unit.
4. For replacement stainless steel bolts for access/outlet channel grates - order Part No. 95526 (bolt) and 95525 (washer).

### Other ACO INFRASTRUCTURE Products

- **TrafficDrain** - 4" internal width trench drain with high intake grates
- **CurbDrain** - monolithic curb and drain unit
- **BridgeDrain** - 8" internal width fiberglass bridge scupper
